

Finite-sample ridge trajectories in prediction--control geometry (fixed design X)

a Fixed $\lambda = 0.05$ ($\kappa = 0.0518$); vary σ^2 on log grid

b Fixed $\sigma^2 = 0.25$; vary λ/κ on log grid

- prediction iso-error E_{gen}
- - - control iso-error $z \neq 0$
- ★— control optimum $z = 0$
- one coupled realization
- - - noise-realization cloud
- - - conditional mean path
