

Prediction ellipses and control circles for $\Sigma = \text{diag}(1, 0.04)$

Contour metrics

Prediction uses $S = 1.227$; control uses signed z .

Semi-axes: $\sqrt{E}$, $\sqrt{E/\varepsilon}$; circle diameter: $0 \leftrightarrow (1+z)\beta^*$.

Prediction: $E_{\text{gen}} = 0.01$, $R_{\text{gen}}^2 = 0.992$

Prediction: $E_{\text{gen}} = 0.04$, $R_{\text{gen}}^2 = 0.967$

Prediction: $E_{\text{gen}} = 0.09$, $R_{\text{gen}}^2 = 0.927$

Control: $z = -1/3$, $E_{\text{acc}}/S = 0.25$, $R_{\text{acc}}^2 = 0.889$

Control (optimal): $z = 0$, $E_{\text{acc}}/S = 0$, $R_{\text{acc}}^2 = 1.000$

Control: $z = 1$, $E_{\text{acc}}/S = 0.25$, $R_{\text{acc}}^2 = 0.000$
