

Pixel ridge: selection policy vs risk estimator

$E_{\text{gen}}: \text{DE}$
 $E_{\text{gen}}: \text{ridge MC}$
 $E_{\text{acc}}: \text{leading DE}$
 $E_{\text{acc}}: \text{distributional DE}^*$
 $E_{\text{acc}}: \text{ridge MC}$

Same selected alpha within each column; MC error bars: ± 2 SE. *Moment-matched Gaussian surrogate, not a full distributional theorem.
